The newest game is now on Steam. Little Tail is finally here. In this spin-off of Tail: Marin, you can now travel with a friend in a weird, imaginary world. It's a town game that has nothing to do with "playing" by yourself. Support us on Kickstarter or join the community on the Discord channel: Follow us on twitter: Overview Tail: Marin is a direct sequel to Tail: Behind, and stars Tail and Marin, the major characters from the original game. Many of the elements of gameplay have been refined, including the addition of a new mechanic that allows players to link their fingers with whatever they're holding, letting them be more expressive in their poses. Players are also now able to interact with the town of Twinbrook to interact with other characters. In addition, dual controllers are supported, allowing players to use Twinbrook in local multiplayer mode. Tail: Marin was released worldwide on April 16, 2017 for Microsoft Windows, macOS, and Linux. The PlayStation 4 version is scheduled to be released in October 2017. A Nintendo Switch version, to be developed in collaboration with Firebrand Games, is planned to be released in 2018. Story As before, the game is set in Tail's world, where the playable characters live with the Gaia Goddess, who created them after a war. As in the original game, players will take the role of the main character Tail, as well as one of six companions, such as Marin, in this 2.5D game. One year after the events of the original game, Marin finds herself in the new world created by the Goddess, and she encounters a village known as Twinbrook, which she helps to restore to its former glory. Localization During a livestream hosted on Twitter, a Japanese translator stated that the localization process was also made difficult due to the frequency of code changes which appeared in the game. The game was officially localized and released in North America by Atlus USA and in Europe by Rising Star Games. Nutrition Reviews recently reviewed 35 studies on 23 different types of red meat and found no conclusive evidence that eating it had any long-term effects on heart health. That's good news, since a diet heavy in processed red meat can raise the risk of getting heart disease, especially if you're a man. It's one of the most hotly debated dietary questions in health: You don't want to take the risk, but you can't eat meat every day. However, the nutrition professionals who wrote the review did find some reasons to be cautious about high-meat diets. They said eating large quantities of red meat and poultry increases the amount of cholesterol you absorb, which in turn raises your risk for high cholesterol. "There is a study that says people who eat lots of lean red meat increase their cholesterol, but it's not large amounts," says health journalist and eating expert Lisa Leslie. She says there may be a problem with animal protein, in general, and that vegetarians are probably healthier than people who eat meat. Leslie says most people aren't getting enough plant protein. "You need to eat vegetables and grains and a little protein," says Leslie. But there are some people who are at risk for heart disease and need to have more protein in their diets. The best dietary sources are fish, poultry, legumes and eggs, says Leslie. "Fish has great protein. It's a great source of omega-3 fats that help the heart," says Leslie. You may need to eat more fish than you think you do. Nutritionist Katja Rowinski says large, fatty fish like salmon, tuna and herring are good sources of heart-healthy omega-3 fats. But Rowinski says fish isn't the only source of these heart-healthy fats; you can also get them from foods like avocado, walnuts and flax seeds. "Eating fish is not a bad idea, but you can also have these fats from other foods like nuts and seeds

What's new:

It was January 17, 1993. You were driving down a highway in San Diego County, California. At around 4:55 in the afternoon, you ran a red light at an intersection, which caused you to make an incorrect left turn onto a one-way street. As you made your initial turn, you slid into the back of a Mercedes sedan driven by an elderly man, Eddie B. Mills Jr. You were unhurt, but Mr. Mills came out of his car with a black bag in his hands. When he called out to the man behind the wheel, the driver slammed on the brakes and came to a screeching halt. You were not the intended target, but that didn't make you feel any worse than the driver and he immediately started running towards you. He had a handgun and you were convinced that he was going to kill you. In reality he was moving to give the man who was already bleeding, Eddie. Mr. Mills was enraged. The man behind the wheel, Darrin Clark, handed you the gun and ran away. Mr. Mills was able to pull you out of your car and pulled you into his own. You had to help him to hospital. He was bleeding, gravely injured, but calm and level headed. Someone had gone to get an ambulance, and they returned with an EMT and a nurse. Eddie became very angry, telling them that he wanted to die, that he couldn't go on, and that he didn't want to be alive. The EMT and the nurse reassured him that he had been hit and that he needed emergency surgery. Mr. Mills took their words to heart. For those few minutes that everyone was talking, taking care of Eddie, a calm descended upon the EMT, and everyone agreed on procedures to follow. The hospital called the local sheriff's department to ask that they and the police be waiting at the hospital to respond to a possible attempted murder charge from the victim. The subject of that conversation—that life-changing event for those who were there—was actually set up by two high school boys who went to school with one of them. The boys had snuck into the parking garage of the hospital while they were out jogging and had scoped out the scene. One of the boys, an older boy, had decided on what he could learn. He recorded the conversation on a tape recorder so he could play it back later. He had watched and

1. Field of the Invention The present invention is a direct acting telescopic hydraulic cylinder assembly having all internal parts thereof housed in the top envelope of the cylinder assembly. The housing includes a bearing bracket having a bearing pin which is fixed to, and protrudes from, the bearing housing wherein the bearing pin is partially located within an aperture in the circular head cap of the cylinder housing. **2. Description of the Prior Art** In the construction of telescopic or telescopic extension type hydraulic cylinders, it is known in the art to house internal parts of the hydraulic cylinder in the top envelope of the cylinder. Such configurations include the telescopic hydraulic cylinder assembly disclosed in U.S. Pat. No. 4,521,977. The cylinder disclosed in the referenced patent includes a top envelope, a bearing housing, upper and lower cap assemblies and internal coil springs extending between the upper and lower cap assemblies. The top envelope extends around the interior of the cylinder and the internal parts of the cylinder are contained in the top envelope. The bearing housing is mounted within the top envelope and on the one hand a bearing pin projects from the bearing housing and on the other hand the bearing housing on the bearing pin, which is parallel, extends through an aperture formed in the upper cap member. When the extension pad is extended, the upwardly projecting bearing pin must be maintained in coaxial alignment with the cylinder rod which rides over the bearing pin. In the patented device, when the extension pad is expanded the bearing pin and the bearing housing at the top of the cylinder slide upward
